Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

- The meaning of the term "fat-free region," as set forth in claims 1 to 5 and 11 to 15, is unclear.
- Claims 1 and 11 include the disclosure "separating the aforementioned entire fat-containing region into a visceral fat-containing region and a subcutaneous fat-containing region based on the position information for the fat-free region." However, the manner in which the entire fat-containing region is separated into a visceral fat-containing region and a subcutaneous fat-containing region is unclear, even with consideration of the disclosures in the description.
- Claims 4 and 14 include the disclosure "interpolating the areas between the plurality of observed points by means of higher order spline interpolation." However, the description does not include any disclosure in relation to higher order spline interpolation.
- Claims 5 and 15 include the disclosure "eliminating the layers of epidermal tissue from among the fat-free regions." However, the description does not include any disclosure in relation to the feature of eliminating the layers of epidermal tissue.
